

Graphical Printing Service

Integrate and deploy graphical reports within your PROIV applications for more professional data presentation.

Key Features

- Closely Integrated with your Application
- Ease of Development
- Ease of Deployment

Benefits

- Design
- Integration
- Deployment
- Management

- Do the applications you design generate or rely on information that you must present to users in a clear and professional format?
- Is it easy to connect to the data or professional reporting tools when designing your applications?
- Does your reporting process rely on you knowing additional report writing skills?
- Can the results be easily printed or stored away?
- How much time do you spend on report maintenance to address ever-changing user requirements?
- Do you have to spend time and money learning report writing skills and buying additional software?
- Do you have to spend time running and distributing reports on a regular basis

Designed for use across development, deployment, and data environments, PROIV can provide an intuitive graphical printing service that helps address the challenges associated with presenting dynamic data within applications. PROIV can assist developers with a faster way to access data, transform it into dynamic information, and integrate it into PROIV applications. With minimal additional coding, PROIV can provide end users with a variety of flexible interactivity options including report viewing, printing, exporting,

drill-down, and modification. The Reporting toolset also includes the ability automatically schedule and distribute standard reports.

The PROIV Printing Service will convert existing character based PROIV reports, re-design existing reports written in 3rd party languages or design new reports to provide a professional presentation of critical application information. PROIV can help to easily modify or add reports to your application without impacting core business logic or having to recompile and regression test your application. This helps reduce application maintenance requirements that result from ever-changing end-user specifications.

Key Benefits

Design

The PROIV Reporting Service can make it easy to convert existing PROIV reports to professional graphical reports.

Integrate

The PROIV Reporting Service gives you the flexibility to tightly integrate your report interactivity (including viewing, exporting, printing and distribution) into your PROIV Application

Deployment

The PROIV Reporting Service provides you with powerful deployment tools for ease of setting up new reports and maintaining new reports

Key Features of PROIV Printing Services

Closely Integrated with your Application

- Allows professional graphical reports to be produced from within your PROIV application
- Graphical Reports are rendered on the Users PC for analysis, drill-down, printing, storing or further distribution

Ease of Development

- Easily converted from existing PROIV report functions
- Additional reports or modifications are straight forward to include
- Skill base remains in PROIV so no requirement to learn new complex skills or buy expensive new tools

Ease of Deployment

- PROIV's Reporting Toolset allows easy deployment of new reports
- PROIV's Reporting Toolset allows for easy maintenance of existing reports

The Service

The first Service PROIV can offer is the Report Conversion Service. This service will convert existing PROIV reports into graphical replacements. The first stage would be to design the layout of the graphical reports including graphics, text, colour, layout and structure. After this the reports will be converted. The final stage is the installation of the Reporting Toolset, which includes the Report Viewer, together with the new graphical reports and updated PROIV code.

The second Service PROIV can offer is the Report Development Service. This service will write new graphical reports either from provided specifications or from existing reports. This solution would also involve the installation of the Reporting Toolset and the new graphical reports.

Costs

These are available on request and will include an initial design process to ensure consistency and agree aesthetics.

Pre-requisites

- Server must be on PROIV Version 5.5 or above
- User PCs must have the .NET Framework installed
