

Transoft U/SQL Adapters

Add the power of relational ODBC access to your non-relational data

"To make fully informed decisions, knowledge workers must have quick and reliable access to their corporate data. Transoft's proven U/SQL Client-Server technology makes it happen."

Richard Gooding, Product Manager, PRO-IV

The simplest , fastest way to add value to your PRO-IV applications

Transoft U/SQL Adapters... the leading ODBC middleware product for non-relational data

Transoft U/SQL Adapters provide direct Microsoft ODBC (Open Database Connectivity) access to your PRO-ISAM and other non-relational data. This allows you to use the widest possible variety of PC Windows products without changing your code or exporting your data.

- **Office Systems**
Create direct links from your data into spreadsheets or WP documents.
- **Report Writers & Business Intelligence Tools**
Use the latest GUI-based reporting and decision support products, such as Crystal Reports, Cognos Impromptu and EUREKA:Reporter, including Web versions.
- **Windows-based Development Tools**
Modernise your applications by selectively developing *and integrating* modules in Visual Basic, Delphi, PowerBuilder etc.

Transoft Gateway Adapters... designed for the Web environment

Reduce the data-to-knowledge time by making your PRO-IV data accessible any time and any place

- Batch or straight-through data transfer
- Re-use established U/SQL skills for quality results.

Flexibility and Performance

- Choice of single and multi-tier with most data sources
- Multi-tier UNIX or Windows NT Server
- Single-tier Windows
- User-configurable 'Read Only' control
- User Authorisation and Grant & Revoke security
- Multi-company support
- High performance SQL server with optimised query planner.

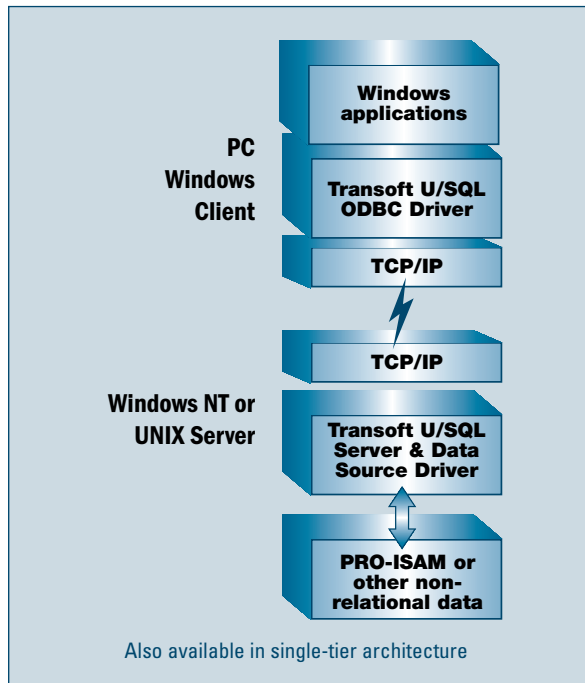

evolving new solutions from existing applications

AT A GLANCE

Transoft U/SQL Adapters provide direct Microsoft ODBC (Open Database Connectivity) access to your PRO-ISAM and other non-relational data allowing you to use the widest possible variety of PC Windows products without changing your code or exporting your data.

The simplest , fastest way to add value to your PRO-IV applications

Transoft U/SQL Adapters multi-tier architecture - for optimum performance

Now you can integrate your non-relational data with the widest choice of ODBC-enabled PC products, including:

- Excel
- Access
- Crystal Reports
- Impromptu
- EUREKA:Reporter
- Visual Basic
- Delphi
- PowerBuilder

Transoft - Company Overview

Since 1986 Transoft has been helping organizations to evolve new solutions from their existing applications, delivering improved business processes - faster, with less risk and at lower cost.

Transoft's specialist tools and services have enabled thousands of companies to adopt the latest technologies as part of the development lifecycle of their existing applications. They have been able to keep applications productive and relevant to changing business needs for longer, therefore providing a continued return on investment.

Transoft provides application mining, migration, modernization and integration solutions to customers in every region of the world, from offices in the USA and Europe, and with local business partners.

Our customers include many Fortune 500 and Times 100 companies, hundreds of small to medium sized corporations, and a network of resellers and distributors in more than 40 countries.

"We looked at a number of solutions, but Transoft U/SQL was the only one which was mature enough for our requirements. It was also the only product which worked perfectly at the first time of asking!"

Iyad Sawaf, Director, Product Engineering, Uni/Care Systems Inc.

Transoft enables you to deliver improved solutions – faster, with less risk and at demonstrably lower cost
